**MASTER OF SCIENCE PROGRAM IN
MOLECULAR AND CELLULAR BIOLOGY**

Attendance list for colloquia (1,5 ECTS, i.e. attending 20 presentations required)

First name	Family name	Matriculation number

In order to successfully finish the Master of Science program in Molecular and Cellular Biology, you are required to attend 1,5 ECTS credits worth of colloquia. This means that you have to attend at least 20 scientific presentations during the master's program.

The presentations must be about 45 minutes (or more) followed by a discussion, and you are encouraged to actively engage in the discussion at the end by asking questions. Scientific presentations at and talks of invited speakers hosted by e.g. the various graduate schools, the Gene Center, the Biochemistry department and the Max Planck Institute are considered to be colloquia for this purpose. Regular work group seminars however will not be taken into account as colloquia.

At the end of the colloquium (after all questions have been answered and the organizer has thanked the speaker, not earlier!), you can ask the person that organized it to sign the list. This is usually a faculty member and the person that introduced the speaker.

Scheduled presentations are posted at the various Biocenter entrances, bulletin boards and on the faculty website (for an overview, also see <http://www.biochem.mpg.de/de/seminars>).
